

The simple way to ambulatory care

Rythmic

A family of ambulatory infusion pumps

tailored by therapy...

Rythmic™ Plus indicated for :

Acute and chronic Pain management :

- Custom made menu with or without Bolus/Dose limit/Loading dose to fit therapy protocols and avoid set up errors
- Easy review of patient history thanks to the easy-to-read history menu on the pump graphical display or the handy portable printer

Continuous infusion therapies such as Chemotherapy, Cystic fibrosis, Primary Pulmonary Hypertension, IVIG...

• Simplified set up menu for a 3 steps start procedure : Enter Rate+Volume to infuse and Start infusion.

Mini Rythmic™ PN

for Home Parenteral Nutrition (HPN)

- The air filter eliminator is positioned upstream the air detector to avoid repeated air alarms and related priming constraints
- Extremely compact and lightweight for such application: 390g with battery pack providing up to 3.5L of infusion at 400ml/h
- · Extremely quiet

Rythmic™ PCEA

to reduce the risk of medication errors in Epidural and Intrathecal routes:

- A clear colour identification of the infusion route from the pump to the patient via a yellow coloured code along the infusion set
- A higher pressure limit range
- A range of dedicated transport bags for external container infusion

Rythmic cnnect

Remote control for home infusion therapies

Rythmic™ Connect

is a wireless, real time technology using a GPRS mobile phone associated to the infusion device. It enables the ambulatory Rythmic pump to communicate with a web server providing its infusion status on www.micrelcare.net

Physicians, nurses and homecare service providers

can access from anywhere the status of their patients' infusion through the web. Infusion parameters can be remotely controlled and potentially adjusted thus saving on the costs of nursing time.

Nurses receive SMS messages
based upon selected warnings or pre warnings, thus
anticipating potential episodes according
to the event log / status of the infusion.

■ Rythmic™ Connect linked to www.micrelcare.net represents a unique and major step forward in the practice and management of the home care infusion therapies.

It undoubtedly contributes to an

It undoubtedly contributes to an improvement for the home patient's quality of life.

...the smart choice for safety and patient freedom

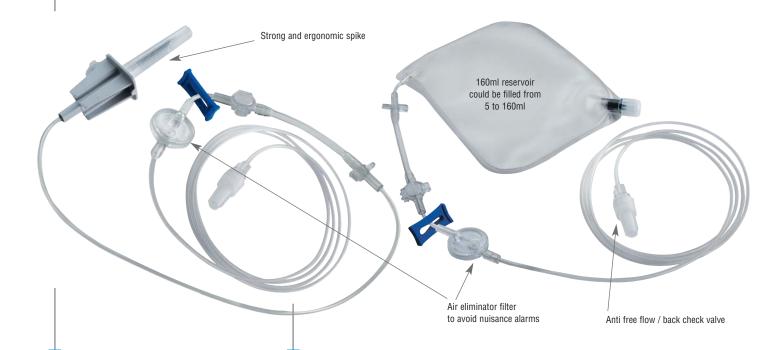

Rythmic is "Alarm free"

The pump has been designed to decrease most of unnecessary potential alarms whilst preserving full safety:

- No air alarm thanks to the air in line eliminator incorporated in all sets
- · Automatic restart after occlusion release
- Long battery autonomy (7 days at 2ml/h) to decrease the frequency of battery alarms and related changes

Rythmic offers "All in one" innovative and safety infusion sets:

- All sets include all pre-assembled components thus avoiding additional unsafe connections
- Soft Bag convenient to fill and prime (manually or via the pump)
- In built anti free flow / back check valve, air eliminator, and extension line on all sets

Rythmic offers a real mobility to patients

- Small, ergonomic and compact for true and comfortable ambulatory therapies
- Pump size already includes the drug volume (up to 160ml)
- · Lightweight: 290g with dry cell battery
- Outstanding battery autonomy

Rythmic is simple and intuitive to program

Customisation of the Rythmic according to the user protocol enables easy software programming. By reducing the menu to the minimum required parameters to be programmed, we optimize set up time and decrease potential errors.

Rythmic software is available in 15 different languages.
